2. Citations and explanations

Document 1: Analog of 1.5-bis(4-amidinophenoxy) pentane (pentamidine) in the treatment of experimental *Pneumocystis carinii* pneumonia (Tidwell, R.R. et al.), Journal of Medicinal Chemistry, Vol. 33, No. 4, 1990, pages 1252-1257

Document 2: GB, 868552, A (The Wellcome Foundation Limited), 17 May, 1961 (17.05.61) (Family: none)

The subject matters of claims 1-10 appear to be novel and to involve an inventive step in view of documents 1 and 2 cited in the ISR.

Document 1 describes a compound which corresponds to the case where R^3 in the general formula shown in claim 1 represents a 4-amidinophenyl group.

Document 2 describes a compound which corresponds to the case where R^3 in the general formula shown in claim 1 represents an alkyl group with the number of carbon atoms ranging from 1 to 4.

Nonetheless, documents 1 and 2 neither describe nor suggest arylamidine derivatives in which R^3 in the general formula shown in claim 1 represents a group that is defined in claim 1 but not any of the abovementioned ones.
